# More Precision

**capaNCDT 61x0/IP** // Capacitive measuring system for industrial applications

-  **Compact and robust controller**
-  **Complete sensor portfolio including 15 models**
-  **8m** Cable lengths up to 8 m
-  **IP68** IP68 for harsh environments
-  **Replacing sensor and controller without recalibration**
-  **Triax** Triaxial design for stable measurement results

The capaNCDT 61x0/IP is an industrial-grade, capacitive measuring system for inline quality assurance and for plant and machinery control. This precise sensor system consists of a sensor, a sensor cable and a controller, which are ready for use without any on-site calibration. The sensor system detects parameters such as distance, deflection, expansion, displacement and deformation on conductive targets. Very good temperature stability, insensitivity to magnetic fields and a robust design make the capaNCDT 61x0/IP ideally suitable for measurement tasks in industrial environments.

### Robust sensor cable

- Temperature resistant
- Tread-proof
- Lengths up to 8 m

### Industrial controller

- Compact aluminum die-cast housing
- Dust-proof and watertight (IP68)
- Industrial outputs: current, voltage, RS485

### Wide sensor range

- Robust & temperature resistant
- Exchangeable without recalibration
- Models: flat / cylinder / thread

Modell	DT6110/IP/U	DT6120/IP/U	DT6110/IP/I	DT6120/IP/I
Resolution	static 2 Hz			0.01 % FSO
	dynamic 1 kHz			0.02 % FSO
Frequency response (-3 dB)			1 kHz	
Linearity			$\leq \pm 0.1$ % FSO	
Temperature stability <sup>1)</sup>			50 ppm FSO/K	
Sensitivity			$\leq \pm 0.1$ % FSO

### Connector types

### Supply and signal cables

**SCAC3/6/IP** Signal cable analog/digital with IP68 plug and anti-kink sleeve  
**SCAC3/6** Signal cable analog/digital

- Open ends or type B plug (controller)
- 3 m long
- Temperature resistance  $-40\text{ °C} \dots +90\text{ °C}$  (in motion);  $-50\text{ °C} \dots 90\text{ °C}$  (motionless)
- Outer diameter:  $4.85\text{ mm} \pm 0.15\text{ mm}$
- Minimum bending radius  $>37.5\text{ mm}$

### CCgx/E sensor cable for flat sensors

- 4 m long, with patented miniature plug
- Type B plug (controller), type E plug (sensor)
- Temperature resistance:  $-20\text{ °C} \dots +80\text{ °C}$  (permanent);  $-20\text{ °C} \dots +100\text{ °C}$  (10,000 h)
- Outer diameter:  $3.1\text{ mm} \pm 0.1\text{ mm}$
- Minimum bending radius static  $>10\text{ mm}$ ; dynamic  $>22\text{ mm}$  (30 mm recommended)

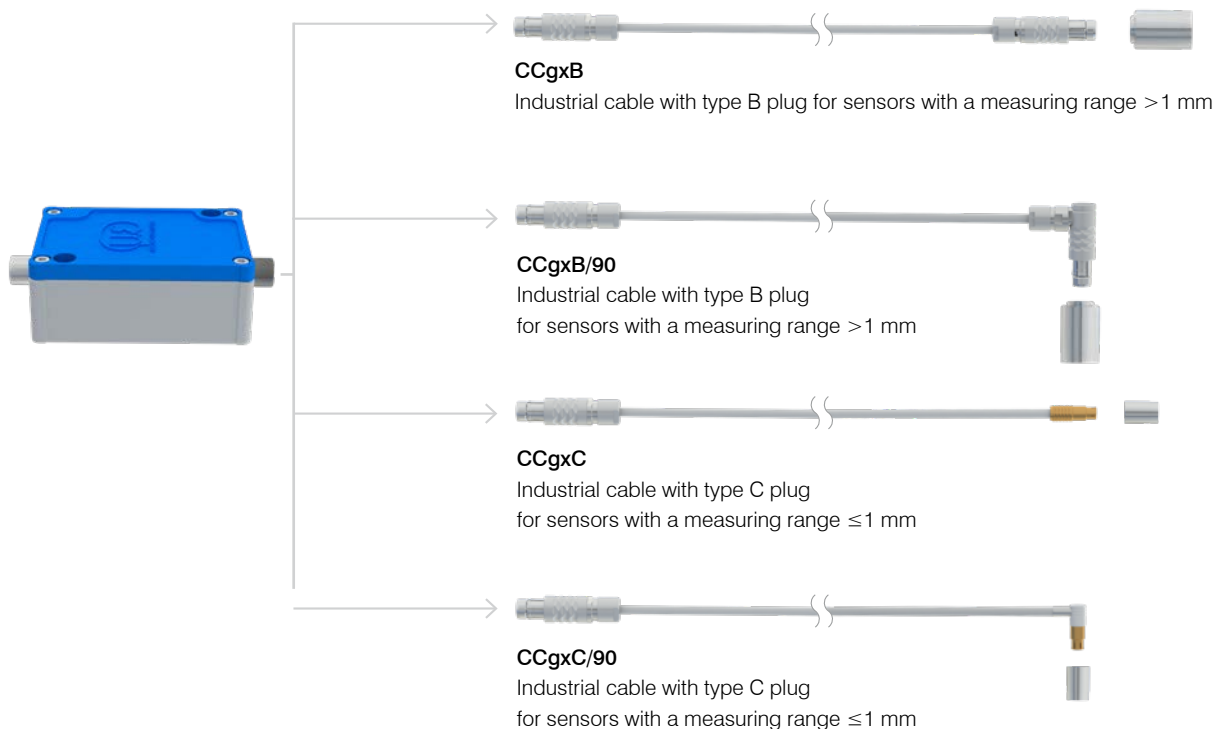

### CCgx/PT Tread-proof sensor cable with protective metal tubing

- Type B plug controller side, (IP68)
- Available with 1 m, 2 m, 4 m, 6 m and 8 m
- Temperature resistance -20 °C ... +80 °C (permanent); -20 °C ... +100 °C (10,000 h)
- Outer diameter: 6 mm ± 0.15 mm
- Minimum bending radius static >20 mm; dynamic 30 mm

### CCgx sensor cables for industrial applications

- Type B plug (controller)
- Available with 1 m, 2 m, 4 m, 6 m and 8 m
- Temperature resistance -20 °C ... +80 °C (permanent); -20 °C ... +100 °C (10,000 h)
- Outer diameter: 3.1 mm ± 0.1 mm
- Minimum bending radius static >10 mm; dynamic >22 mm (30 mm recommended)

### Special solutions for the industry on request

Application examples are often found where the standard versions of the sensors and the controller are performing at their limits.

For these special tasks, we modify the sensors according to your individual requirements. Changes requested include, for example, modified designs, target calibration, mounting options, individual cable lengths, modified measuring ranges or sensors with integrated controller.

Bendable extended sensor board for restricted installation space

Triaxial connector for cable extension with miniature type E plug

90° plug for special installation scenarios

### Optional linearity calibration for improved linearity

With linearity calibration, the controller is calibrated with the sensor cable and the sensor. This improves the linearity values by a factor of approx. 10. When replacing a sensor, the controller must be adjusted again in order to maintain improved linearity.

#### Example:

The linearity of a system consisting of a DT6120/IP/I controller, a CCg6B/PT sensor cable and a CSE2 sensor is 0.3 % FSO (6  $\mu\text{m}$ ). After linear calibration, the linearity increases to 0.02 % FSO (0.4  $\mu\text{m}$ ).
